

Currently, Vermont has 4.5 million acres of forested land.

The **same acreage** as 30 years ago.

Acres of land in agricultural use:

<u>In 1989</u>	<u>Now</u>
950,000	1,200,000

Will the Vermont landscape experience significant alterations?

In 1989, Joe's Pond in Danville, VT thawed on May 5th. This year it happened 10 days earlier.

The climate will change over the next 30 years. How will it change and who will it most impact?
